

SNDK Momentum + Daily Digest — Presenter Cheat Sheet

Poll ~60s · 1 active episode/ticker · Milestone alerts only · Digests = 3 fixed day check-ins

TWO CHANNELS

- **Episodes** = is momentum active now? Short window, frozen ref, state machine.
- **Daily Digest** = open/midday/close vs yesterday's close. Calendar. Never touches episodes.
- Same ticker, same day, different math & rails.

BOSS ONE-LINER

One coherent momentum story when a short-horizon thr hits; freeze measurement; push only on milestones. Digests are separate session pulses. After expire we never re-package the same elevated move as a longer window.

1 · EPISODE LIFECYCLE

STARTED → **HOLDING** → **ACCEL (+2pp)** / **WEAKENING (25%, silent)** → **STRONG WEAKENING (60% push)** → **RE-ACCEL (+2pp)** · or terminal **EXPIRED** · **REVERSED** · **ENDED** · **MARKET CLOSE**

Rule	Default	Say this
START pick	Shortest thr hit ≤24h/day	5m beats 3h/24h — freeze that ref/% only
Direction	From shortest window	Not strongest move (stale 24h -8% loses to 5m +3.5%)
While ACTIVE	No 2nd START	Shorter window ≠ new episode
Accel / Re-accel	+2 pp	Vs last notified / recovery anchor
Strong giveback	≥60%	Push once/cycle — NOT true reverse
Expire	60m no ≥0.5pp extreme	Silent even if still +10%; then DISARM direction
Re-arm	max dir < thr-1pp all windows	Blocks 3h expire → 24h "still +6%" re-START
True reverse	Erase ref + opposite thr	One reverse push; opposite START silent

PUSH YES

- ✓ START (research + ACTIVE + ≤~5 min)
- ✓ Accel +2pp · Strong giveback 60%
- ✓ Re-accel +2pp · True reverse (1×)

PUSH NO

- ✗ Holding / Weakening 25–59%
- ✗ Expire / close / manual end
- ✗ Longer-window 2nd START · disarmed restart · stale research

2 · SAY OUT LOUD — ANTI-SPAM

Scenario	Must do
5m + 3h + 24h all qualify	One START — shortest only (e.g. 5m)
START 3h +7% → EXPIRE → later 24h +6%	NO START / NO "+6% in 24 hours" push
5m thr while 24h still hot post-expire	Blocked — re-arm uses max move across windows
Research 35 min late	Save research; suppress START push (TTL ~5 min)

3 · DAILY DIGEST (independent)

Slot	ET	Example	Measure
OPEN	09:40	■ SNDK opens strong ↑ +1.4%	Day vs prev close
MIDDAY	~12:45	■ SNDK holds higher ↑ +2.8% at midday	Day vs prev close
CLOSE	16:05	■ SNDK closes higher ↑ +1.9% today	Day vs prev close

Equities/indexes only · max 3/day · watchlist push · never opens/ends episodes · expire ≠ cancel digests

4 · SAMPLE DAY + CLOSE

Time	What
09:35 EP · 09:40 DG	START (5m) · OPEN digest (day %) — both can say "up," different math
09:55 / 10:45 / 11:10	ACCEL · STRONG GIVEBACK · RE-ACCEL
12:45 DG · ~13:50 EP	MIDDAY · EXPIRE silent + UP disarmed
15:40 / 16:00 / 16:05	New START only if re-armed · market-close archive · CLOSE digest

FROZEN MATH

((live - frozenRef) / frozenRef) × 100
Never swap to day/24h mid-episode.

FAQ

- Every 1% tick? No — milestones. · Expire if still up? Active ≠ residual. · Weakening vs reverse? Fade from peak vs through ref + opposite thr. · SNDK-only? No — all watchlist tickers.

Close: Episodes = "is a move active?" Digests = "session vs yesterday at 3 fixed times." Together: high-signal alerts, one live episode/ticker, no longer-window re-packaging after expire.
