

Trigger alerts A–Z — SNDK examples (exact production copy)

Generated from `notifyCopy.js` / `autoStartAlert.js` / `marketSessionBulletin.js` / `dailyDigest.js`. Stocks lead with **SNDK** (never company name). Colored ● = green/red circle emoji on the lock screen. Scenario numbers are illustrative; templates are live.

1. Episode START (push after Perplexity)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	Episode opens on day window in pre-market (after Perplexity)	● SNDK +4.2% surge in pre-market so far	Investors are reacting to stronger-than-expected NAND demand commentary.	Push after Perplexity; body = likely_driver. Raw MOMENTUM_STARTED alone is not pushed.
2	Episode opens on ~60m window during RTH	● SNDK +3.1% rally in last 48 minutes	Sharp upward momentum detected.	Generic body if research has no driver.
3	Downside episode starts	● SNDK -5.4% drop in last 1 hour 30 mins	Sharp downward momentum detected.	

2. Acceleration / recovery (auto-push)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	Material extension after last alert (+2pp style)	● SNDK adds another +3.0% in 25 mins	The surge now stands at +7.2% over 48 minutes.	
2	Downside continues extending	● SNDK falls another 2.7% in 25 mins	The decline now stands at -6.8% over 48 minutes.	
3	After strong fade, move builds again	● SNDK is accelerating again	The move has recovered from +3.2% to +6.5% after the earlier fade.	
4	Further +2pp after a prior re-acceleration	● SNDK extends its recovery	The surge now stands at +8.4%.	
5	Further extension after re-accel on DOWN episode	● SNDK extends its decline	The decline now stands at -9.1%.	

3. Strong giveback ≥60% (one-shot auto-push)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	≥60% of peak UP move given back (one-shot)	● SNDK has given back 60% of its surge	The earlier +8.0% move has faded sharply, with about +3.2% remaining.	
2	≥60% of peak DOWN move recovered (fade of decline)	● SNDK has given back 60% of its decline	The earlier -7.0% move has faded sharply, with about -2.8% remaining.	

4. Full reverse / rebound (research + push)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	UP episode fully reverses (gains erased)	● SNDK reverses lower	Earlier gains have been erased as downside momentum builds.	Also runs Perplexity for reverse why; body may be replaced by driver.
2	DOWN episode rebounds (losses recovered)	● SNDK rebounds sharply	Earlier losses are being recovered as upward momentum builds.	
3	Terminal end with reason REVERSAL (same copy family)	● SNDK reverses lower	Earlier gains have been erased as downside momentum builds.	

5. Market session bulletins (watchlist-wide)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	~5 min after US RTH open (watchlist-wide)	The US market has opened	We will alert you if unusual momentum is detected in any of your watchlist assets. Tap to see what's moving.	
2	~5 min after US RTH close (watchlist-wide)	The US market has closed	Trigger never sleeps. We will alert you if unusual momentum is triggered on any of your watchlist assets.	

6. Daily digests per ticker (if enabled)

#	When it fires	Lock-screen TITLE (exact)	BODY (exact)	Notes
1	Per-ticker market-open digest (if enabled for user)	● SNDK opens strong ↑ +1.8%	Shares are trading 1.8% above the previous session close after the opening move.	
2	Per-ticker market-close digest	● SNDK closes lower ↓ 0.6% today	SNDK finished the session 0.6% below the previous session close.	

7. Silent (timeline only — NO Expo push)

State / event	What happens
HOLDING	Still in move, small giveback — no new push
WEAKENING (<60% giveback)	Fading under strong-fade threshold — no push
Sub-threshold re-accel	Policy spam guard — no push
ENDED · EXPIRED / INACTIVITY	Episode cools — no push
CLOSED_AT_MARKET_CLOSE	Session housekeeping — no push
RESEARCH_RUNNING / DONE	Pipeline markers — no push
Raw MOMENTUM_STARTED	Waits for Perplexity → then MOMENTUM_ALERT_SENT push

START intensity words: UP <2% none · 2–4% rally · ≥4% surge · DOWN <2% none · 2–4% slide · ≥4% drop · ≥8% plunge. **Typical UP day:** START → ACCEL → optional STRONG GIVEBACK → optional RE-ACCEL → REVERSED or silent EXPIRED.
